

ALA - 2 : Python Deep Dive: Interview Intensive

Topic: Installing Python & IDLE

Interview Question and Answers

1. What is Python and why do we need to install it?

Answer:

Python is a high-level programming language used for software and web development. It must be installed so that we can write and execute Python programs on our system.

Example:

```
print("Hello World")
```

2. What is IDLE in Python?

Answer:

IDLE (Integrated Development and Learning Environment) is a built-in editor that comes with Python, used to write, edit, and run Python programs easily.

Example:

You can write:

```
a = 5  
b = 10  
print(a + b)
```

and run it in IDLE

3. From where can Python be downloaded?

Answer:

Python can be downloaded from its official website:
<https://www.python.org>

Example:

Go to → Downloads → Click “Download Python 3.x”

4. What are the basic steps to install Python?**Answer:**

Visit python.org
Download the latest version
Run the installer
Select “Add Python to PATH”
Click on Install

Example:

While installing, tick ✓ “Add Python 3.x to PATH” before clicking install.

5. Why is the “Add Python to PATH” option important?**Answer:**

It allows Python to be accessed from the command prompt without specifying its full installation path.

Example:

Without PATH:

C:\Python39\python.exe

With PATH:

python

6. How can you verify that Python is installed correctly?**Answer:**

Open Command Prompt and type:

python --version

If the version is displayed, Python is installed successfully.

Example Output:

Python 3.11.5

7. How can you open IDLE after installing Python?**Answer:**

Go to the Start Menu, search for “IDLE”, and click on the IDLE (Python GUI) application.

Example:

Start → Type “IDLE” → Click “IDLE (Python 3.x)”

8. What is the difference between Python Shell and Script Mode in IDLE?

Answer:

Python Shell: Executes code line by line

Script Mode: Used to write and run complete programs

Example:

Shell:

```
>>> 5 + 2
7
```

Script:

```
print(5 + 2)
```

9. On which operating systems can Python be installed?

Answer:

Python can be installed on Windows, macOS, and Linux operating systems.

Example:

Windows → .exe installer

macOS → .pkg installer

Linux → sudo apt install python3

10. What is the file extension used for Python programs?

Answer:

Python programs use the .py file extension.

Example:

hello.py

11. What is the default installation location of Python in Windows?

Answer:

Python is usually installed in:

C:\Users\Username\AppData\Local\Programs\Python

Example:

C:\Users\Nandani\AppData\Local\Programs\Python\Python311
